

THE WILDLIFE CONSERVATION CHARITY

## What to do with your results

### Make a graph!

Use the information you have collected to practice data handling skills, such as making tables and graphs. It will be easier to see what you have found, and it's a great way to get kids excited about making graphs!

### Keep your own records

Each time you survey an area, whether it be in school grounds, a local park or even your back garden, remember to keep your records.

Each survey will add more information to these records, and you will be able to see how species vary from place to place, in different seasons or over time.

### Share your findings

Don't keep your records to yourself!

Submit your records to your **Local Environmental Records Centre** <http://www.alerc.org.uk/> or online via **iRecord** <http://www.brc.ac.uk/irecord/>

Your data can then be used to inform land managers and local planning process and are passed on to the National Biodiversity Network (NBN) (<https://data.nbn.org.uk>) where it is available to government agencies, researchers and members of the public.
