# Bamboo habitat game information.

There is another version of this game where the children can build up the habitat from tree, cave and bamboo hexagons using a spinner. They are still trying to make a clear pathway of bamboo for the pandas to meet. On the spinner, there is also an axe, which when landed on, means they would have to remove one of their bamboo hexagons. This version is available to download from the P1-P3 panda pack.

Both versions show the main threat to giant pandas is habitat loss but also that their habitat is now in small separate areas.

The Panda Folder level 2 further investigates the habitat of the giant panda. There are also current and historic habitat maps of China available to download.
